- With remote login enabled, your sftp server on your Mac is enabled and you should be able to connect to your Mac with SFTP.. You can use the shortcut key Command K for that as well Step 2 – Entering in the ftp server address.. To enable SFTP access to your Mac: • • Open System Preferences and select Sharing.. Be sure the port is set to 22 and click connect If everything is working correctly you should be able to access your Mac file system and folder structure.. Affected Models • MacBook Pro (Retina, 15-inch, Mid 2012) • MacBook Pro (Retina, 15 inch, Early 2013) Note: If your MacBook Pro is not experiencing any of these symptoms and is not one of the products affected, you do not need to contact Apple.. Once done, simply click on connect Since the Finder FTP function does not support some features users may wish to have on their Mac, there are plenty of third party OS X apps that can do the job instead, with full FTP, SFTP, FTPS support, downloads, uploads, queuing, permissions changing abilities, read/write support, and much more.. This will allow the individual to connect to your
